

NET METERING

Tell Governor Evers Wisconsin needs fair net metering policies!

WHAT IS NET METERING?

Net metering is a utility billing policy that enables customers who generate electricity from their own solar systems to receive a bill credit for any energy they export to the grid. This arrangement encourages residential and business customers to invest in solar power, reducing carbon emissions and providing substantial economic benefits to their neighbors and communities.

According to Solar Energy Industries Association (SEIA), "traditional net energy metering (NEM) is fundamentally a bill credit that represents the full retail value of distributed electricity delivered to the distribution system, and has been a critical policy for valuing and enabling distributed generation."

WHY IS NET METERING GOOD FOR WISCONSIN?

-  **ENERGY COST SAVINGS**
-  **MORE CLEAN ENERGY**
-  **COMMUNITY RESILIENCE AND ENERGY EQUITY**
-  **GRID STABILITY AND RESILIENCE**
-  **ENERGY INDEPENDENCE AND EMPOWERMENT**
-  **LOCAL JOB CREATION AND ECONOMIC GROWTH**

Net metering supports rooftop solar, helps customers manage their utility bills, and allows equitable access to clean energy.
Now is not the time to derail the progress made on distributed solar.

Two proposals at the Public Service Commission of Wisconsin will make investing in rooftop solar harder and more expensive. Madison Gas and Electric (MGE) proposes to eliminate net metering altogether. Wisconsin Power and Light (Alliant) proposes to replace net metering with a complicated set of charges and credits that are subject to change.

These utility proposals would depress demand for rooftop solar, leading to layoffs for local clean energy workers and making it difficult for customers and local governments to meet their clean energy goals. Wisconsin needs a robust rooftop solar market to meet our state's decarbonization goals.
